Talk**

**Has Youth
Survey
Data**

Understanding & Sharing Data

Training objectives

By the end of the training, participants will have the knowledge to:

- ❖ **Understand what your data is telling you**
- ❖ **Target your data for specific audiences**
- ❖ **Share your data in an impactful way**

What Data Do You Have?

Process Data:

- » **Strategies & programs implemented**
- » **Numbers served**
- » **Locations reached**

What Data Do You Have?

Outcome Data:

- » **Pre/post surveys**
- » **Curriculum evaluations**
- » **Feedback or satisfaction surveys**

Other Data Sources:

- » **Local & regional data**
- » **YRBS/VYS/PRIDE data**

What Does Your Data Mean?

Percentage of youth who currently use cigarettes

20%

2013

15%

2017

What Does Your Data Mean?

Percentage point change:

- » Difference between the two numbers
- » Subtract $20 - 15 = 5$ percentage point change

What Does Your Data Mean?

Percentage of youth who currently use cigarettes

20%

2013

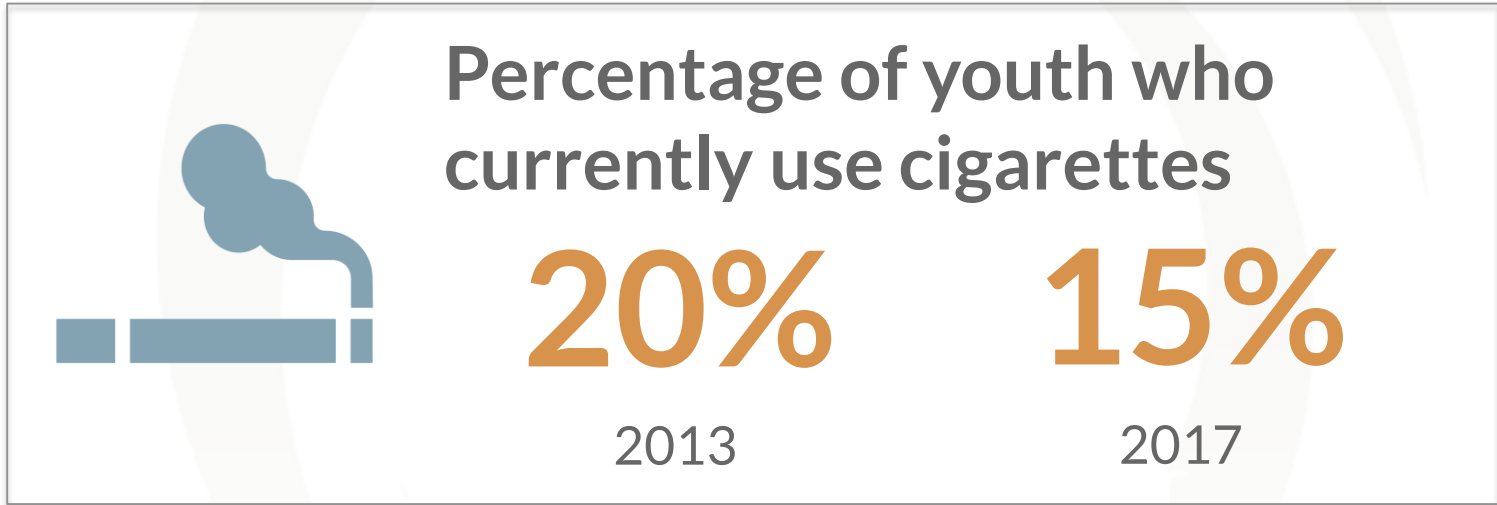

15%

2017

Percent change:

- » Change as a proportion of original number
- » Divide $5/20 = 25$ percent change

What Does Your Data Mean?

Youth cigarette use decreased by:

5 percentage points

25%

What Does Your Data Mean?

Percentage of youth who have ever had a drink of alcohol

40%

2013

60%

2017

Youth alcohol use increased by:

~~5~~ percentage points

~~40~~ percentage points

20 percentage points

What Does Your Data Mean?

Percentage of youth who have ever had a drink of alcohol

40%

2013

60%

2017

Youth alcohol use increased by:

~~10%~~

50%

~~20%~~

What Does Your Data Mean?

Percentage of youth who had alcohol for the first time before age 13

What Does Your Data Mean?

Confidence Interval

A range in which we think, with a certain confidence (e.g., 90%, 95%, 99%) the true value falls.

Lower Limit

Mean

Upper Limit

95% Confidence Interval

What Does Your Data Mean?

Percentage of youth who had alcohol for the first time before age 13

What Does Your Data Mean?

We are 95% confident the true percentage of youth who started drinking before age 13 is between 13.1% and 16.4%.

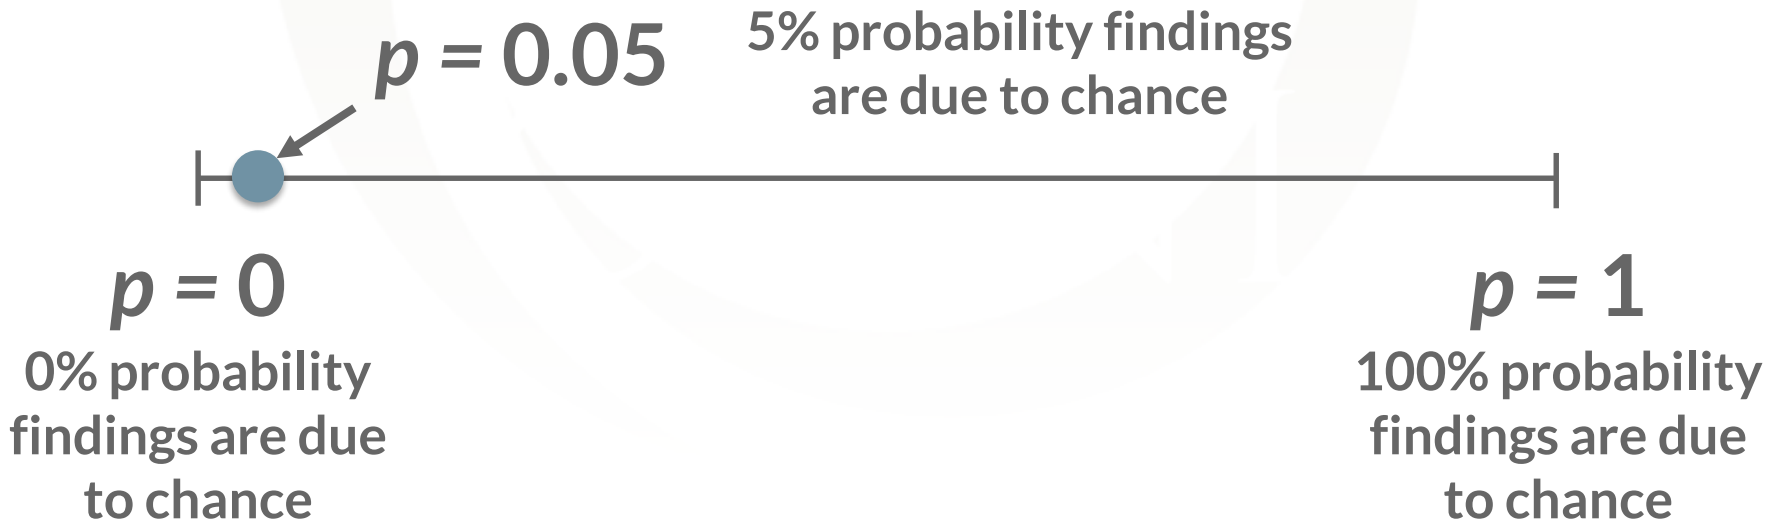

What Does Your Data Mean?

What Does Your Data Mean?

***p*-value**

The probability that the findings are due to chance alone.

What Does Your Data Mean?

***p*-value**

The probability that the findings are due to chance alone.

$p < 0.05$ Findings are
"significant"

$p \geq 0.05$ Findings are not
"significant"

What Does Your Data Mean?

Percentage of youth who had alcohol for the first time before age 13

What Does Your Data Mean?

Percentage of youth who had alcohol for the first time before age 13

If the confidence intervals do not overlap, the two values are considered significantly different.

What Does Your Data Mean?

Percentage of youth who had alcohol for the first time before age 13

Understanding Your Data Example

| Current Rx Drug Misuse – Virginia High Schoolers | | |
|--|-----------------|-----------------|
| | 2015 | 2017 |
| Percent | 16.2% | 19.6% |
| Confidence Interval | (14.1% - 17.6%) | (18.4% - 22.0%) |
| <i>p</i> -value | 0.03 | |

Is the change from 2015 to 2017 significant? **Yes**

Understanding Your Data Example

| Current Rx Drug Misuse – Virginia High Schoolers | | |
|--|-----------------|-----------------|
| | 2015 | 2017 |
| Percent | 16.2% | 19.6% |
| Confidence Interval | (14.1% - 17.6%) | (18.4% - 22.0%) |
| <i>p</i> -value | 0.03 | |

Which statement is correct?

Rx drug misuse increased 3.4 percentage points

Rx drug misuse increased 3.4%

Activity

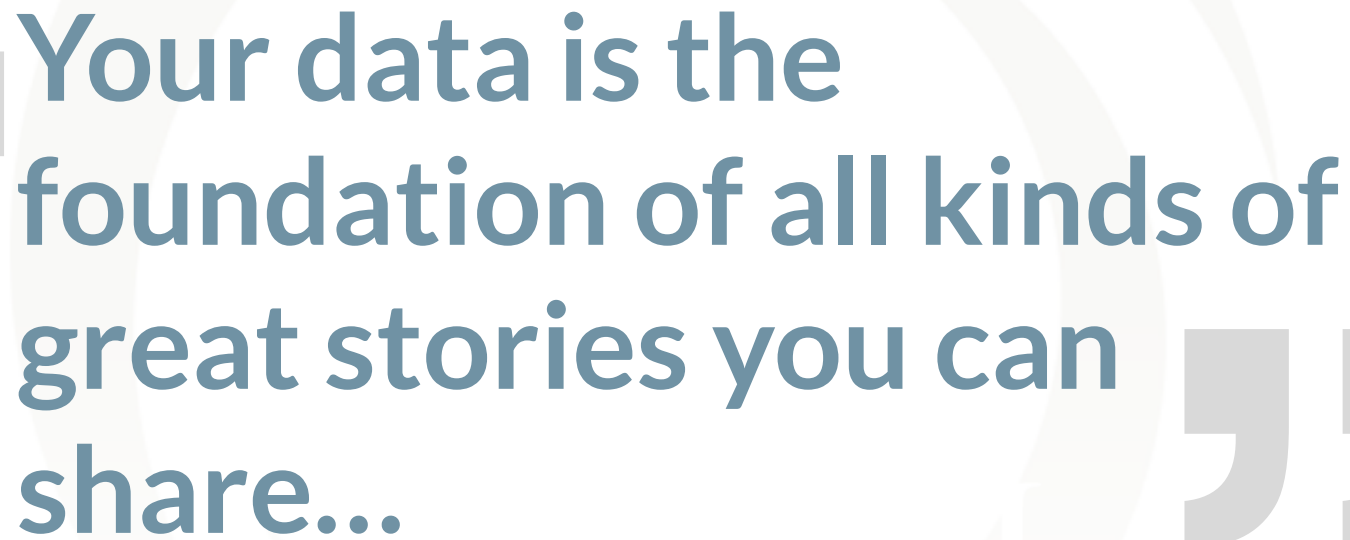

Understanding Your Data Worksheet

What Does Your Data Mean?

***p*-values aren't perfect**

- » Sample size
- » Confidence interval
- » Statistical significance \neq programmatically meaningful
- » Numbers represent real people – that's where the importance is!

Sharing Data

**Your data is the
foundation of all kinds of
great stories you can
share...**

- ❖ **What is your story and how should you tell it?**
- ❖ **Who do you want to tell about it?**

Who

- ❖ Know your audience
- ❖ Identify and target their priorities and interests
- ❖ Understand what you want from them in return

Telling YOUR Story

Everything that can be counted doesn't necessarily count; everything that counts cannot necessarily be counted.

Albert Einstein

How

Techniques of Data Sharing

Fact-based: appealing to reason

Emotion-based: appealing to emotion via analogies, narratives, anecdotes, stories

Positive outcomes: results of your work

Negative results: highlight new program area needs

Techniques of Data Sharing

40% of Virginia high schoolers do not have an adult to talk to at school.

Techniques of Data Sharing

40% of Virginia high schoolers do not have a trusted adult to talk to at school.

That is 154,000 youth – enough to fill the football and basketball stadiums at both UVA and VT.

Techniques of Data Sharing

40% of Virginia high schoolers do not have a trusted adult to talk to at school.

That is 154,000 youth – enough to fill the football and basketball stadiums at both UVA and VT.

“Every day on the bus a group of kids bullies me. I’m just too afraid to tell my parents, and wish I had a teacher at school that I could ask to help me.”

Techniques of Data Sharing

Our nonprofit's tobacco prevention programming has reached over 5,000 youth in just the past five years.

Since we started, the tobacco use rate among these youth has dropped by 2 percentage points every year!

Techniques of Data Sharing

Our nonprofit's tobacco prevention programming has reached over 5,000 youth in just the past five years.

Since we started, the tobacco use rate among these youth has dropped by 2 percentage points every year.

However, data shows that our county still has higher youth smoking rates than our neighboring counties.

Techniques of Data Sharing

Fact-based: appealing to reason

Emotion-based: appealing to emotion via analogies, narratives, anecdotes, stories

Positive outcomes: results of your work

Negative results: highlight new program area needs

Virginia Needs Assessment

Priority Area: Alcohol

Alcohol is the most commonly used substance among youth and young adults in Virginia. One-quarter of Virginia high schoolers (25%) report drinking alcohol in the past 30 days, which is significantly lower than the national average (30%). Since 2008, there has been a decrease in youth alcohol use, but rates remain high relative to other substances. The consequences of alcohol use, such as death and suicide, particularly affect males, 26-35 year-olds, and individuals living in Region 5 (eastern Virginia).

39%

of persons who die by suicide are intoxicated at the time of death.¹

From 2006 to 2016, the rate of alcohol-induced deaths in Virginia remained below the national rate. However, both rates increased during the period.

The percentage of youth in Virginia who had their first drink of alcohol before age 13 has followed national trends and decreased significantly since 2011.

Among Virginians, in the past 30 days:

Across Virginia, the percentage of high schoolers who drank at least once in the past 30 days ranged from 21% to 29% by DBHDS region.

20%

of intake cases for behavioral health services report alcohol use, making it the most common substance of use among intake cases.

The percentage of young adults (ages 18-25) who needed but did not receive treatment for alcohol misuse in the past year is more than twice as high as adults aged 26 years and older.

¹ Includes individuals with a Blood Alcohol Level (BAC) greater than 0%. ² Binge drinking is defined as having four or more drinks of alcohol in a row for females or five or more drinks of alcohol in a row for males, within a couple of hours.

Cocaine and
Meth

Virginia Needs Assessment

COMMUNITY INPUT AND ASSESSMENT

Strengths

- Partnerships
- Coalition support
- Passionate staff

Weaknesses

- Funding
- Staff resources
- Workforce skills

Opportunities

- Emphasis on environmental strategies
- Resources to shift work

Threats

- Cultural, social acceptance of substance use
- Alignment of funding

Virginia Needs Assessment

RECOMMENDATIONS

Fund Priority Areas

Strategies, outcomes
Risk and protective factors

Build Capacity

Prevention workforce
Training
Peer learning opportunities

Lead Initiatives

Messaging
Advocacy
Collaboration and decision-making

2017-18 Review

360 MHFA/YMHFA classes trained over 2,100 community members ● Over 5,000 youth completed Too Good For Drugs ● Disseminated over 1,100 lock boxes ● Millions reached with messaging campaigns ● Over 5,320 pounds of prescription drugs collected ● 12,000 youth completed LifeSkills ● Distributed over 7,000 drug deactivation pouches ● 148 REVIVE trainings equipped 2,300 people with life-saving skills ● Over 85 coalitions with more than 2,000 members

PBPS Data Reminders

2017-18 Block Grant Data Audit

OMNI fixing errors; CPG will upload into PBPS

No action needed by CSB staff

OMNI to send document outlining the changes made
